

Weknowlogy Framework Constitution (Public Edition v1.1)

Purpose

This document defines the Weknowlogy Framework as a governing system for transforming knowledge into intelligence in motion. It serves as the authoritative public reference for how the framework constrains system behavior.

What Weknowlogy Is

Weknowlogy is a framework, not a product, platform, or AI system. It governs how intelligence is formed, applied, and restrained inside products.

Canonical Flow

Knowledge → Understanding → Intelligence → Motion. This progression is non-negotiable and may not be reordered or collapsed.

Core Principles

Intelligence must be designed for action. Motion must be a system, not an event. The highest intelligence includes restraint.

Compliance

Compliance with the Weknowlogy Framework is binary. Products may only claim use of the framework if all constraints are satisfied.
